

# SMART METERING SOLUTIONS UPDATE

## ND Cube 400 IP with [www.meteronline.co.uk](http://www.meteronline.co.uk)

Reading meters accurately, keeping records and producing reports used to be a time consuming and costly process for property and energy managers.

An on-line automatic meter reading system can now be quickly implemented using smart meters and monitored via a standard PC connected to the Internet.

Managed on-line metering is ideally suited to all applications such as retail, industrial and commercial property metering, aiding compliance with the latest building regulations.

Smart electricity meters are multi-function and record cost saving energy management data including demand and load profiles.

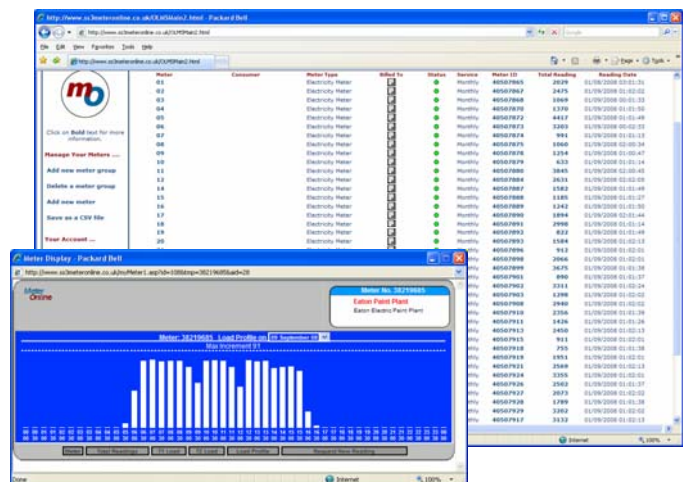

The web based user interface is designed for ease of operation by administration personnel without special training, it uses easy on-screen displays and provides downloadable reports and automatic data export. Meter owners can even check their readings via their mobile phone.

Meter installation is straightforward and may be carried out by any electrical contractor familiar with fitting conventional metering.

Each meter operates independently giving cost savings in comparison with conventional remote metering systems.

Automatically reading even a single meter, located anywhere in the world, now becomes cost effective.

This is a low risk, low initial cost solution, it's possible trial the system with only one meter, then expand to suit your needs.
